AN EXHIBIT OF OURS AT THE ROYAL SHOW FOR WHICH THIS YEAR AT CAMBRIDGE WE RECEIVED A GOLD MEDAL.

NEW AMERICAN INTRODUCTIONS

ONLY PLANTS EX. 2½in. POTS—7/6d. EACH

ADAGIO. (Tiret). Large semi-double, clear red corolla with rosy red sepals. Can be used as bush or trailer.

BLUE LAGOON. (Tiret). Huge double upright with medium blue corolla and rosy red sepals. Corolla heavily veined.

BELVEDERE. (Reedstrom). Very large double, corolla pale blue, mottled dark pink. Sepals dark pink to red. A strong, upright bush. It was awarded the Leo Lee Memorial Award for the best un-introduced seedling at the California National Fuchsia Society Show at Los Angeles in 1959.

B. **BLUE BUTTERFLY.** (Walz). A medium to large semi-double trailer, distinctly different. Short tube and long white sepals, corolla a deep violet blue, splashed with white.

BLUE 'N' WHITE. (Berkeley). Large double spreading, corolla lilac blue, outer smaller petals overlaid phlox pink. White sepals are tinted blush.

CAPRI. (Senabel-Paskesen). The corolla of the huge double petalled blooms is a deep rich blue-violet. Broad, pointed sepals are glistening white.

COSMOPOLITAN. (Castro). Corolla very large blooms with flaring white veined pink petals. Sepals striped salmon.

CURLY Q. (Kennett). Trailer, bush or ground cover. Single. Corolla four rolled petals of violet-purple, small sepals, pale carmine, reflex perfectly into circles which overlap against the tube.

CURTAIN CALL. (Munker). Double corolla has serrated edges and colour ranges from deep rose bengal on centre petals to crimson on outer ones. Carmine sepals.

B. **CREAM PUFF.** (Kennett). Trailer, double, fine-stemmed. Corolla large blooms of pink and white, borne on long pedicels; frilled, creamy-white with delicate pink overlay on outer petals. Sepals, tube long, slender, slightly curved pale pink, becoming white at tips.

DANNY BOY. (Tiret). The huge, double corolla with pale red sepals in same tone, makes a striking show of colour. Plant is a strong upright.

DIABLO. (Tiret). Effective contrast of large double burgundy red corolla with pure white sepals. Very showy trailer or bush.

B. **DUSKY ROSE.** (Walz). A large, double, natural trailer. The medium sized tube and long sepals which curl at tips are a clear deep coral pink. Corolla, a lovely shade of rose with coral pink splashes. As flower matures, colour changes to a raspberry rose shade and opens into a fluffy ruffled bloom. Foliage medium sized, dark green.

FREEDOM. (Martin). Corolla, medium size of dark blue, marbled with red and white, giving it a red, white and blue effect. Sepals, bright red. D.

FLAIR. (Tiret). The large open double corolla is a lovely shade of raspberry pink, with white sepals. May be used as semi-trailer or hanger. Beautiful colour. S.D.

FANCY PANTS. (Reedstrom). Corolla opens a double purple, fading to magenta. Sepals are bright red.

B. FIERY SPIDER. (Munkner). Single, corolla crimson with decided orange flush; long thin tube deep carmine. Long narrow sepals, pale salmon, tipped light green.

FLORENTINA. (Tiret). Semi-trailer, with long tapering buds, opening into large, double smokey Burgundy red corolla. Well recurved sepals are frosty white.

B. FIREBALL. (Waltz.) A large, double naturally trailing variety that is unusual for its many colour changes. The short tube and broad upturned sepals are bright carmine-tipped green. The buds and corolla are a ruddy purple with splashes of carmine at base of petals as flower matures. Some petals turn a dark bluish purple, which again change into a red of great brilliancy.

GREAT SCOTT. (Tiret). Very large double Jasper red corolla, with vermillion markings. Carmine rose sepals. A stiff, upright grower and heavy bloomer. This is going to be liked over here.

KEEPSAKE. (Kennett). Corolla, medium dianthus purple. Sepals, white, flushed pink beneath. D.

LILAC LUSTRE. (Munkner). Double corolla, in a most attractive powder blue or lustrous lilac. Sepals rose red.

LUSCIOUS. (Martin). Corolla, dark wine and red, marbled with orange. Sepals, dark red. D.

MANTILLA. (Waltz.) Trailer with soft willowy branching growth. Bronze foliage. The flowers are deep carmine. Tubes 3 inches in length. The petals are spreading with pagoda-like sepals. Free bloomer. Over here we find it more orange. One of the finest.

MARILYN. (Martin). Corolla, white and very compact, with petaloïdes at the corner of each sepal. Has an oval shape. Sepals, broad and pink. D.

MISS WASHINGTON. (Mounser). Spur of Fort Bragg. Corolla is double white. Sepals rose red.

MARIETTA. (Waltz). Sepals are bright carmine. Corolla a dark magenta red. Has a few splashes of carmine on outer petals.

MIDNIGHT SUN. (Waltz). Sepals pink outerside, underside a bright carmine. Corolla very dark burgundy purple. Splashes of carmine and salmon pink at base of sepals. D.

MORNING LIGHT. (Waltz). Sepals are snowy white outerside, flushed palest pink underside. Corolla double, deep lavender blue. Foliage an attractive shade of light green.

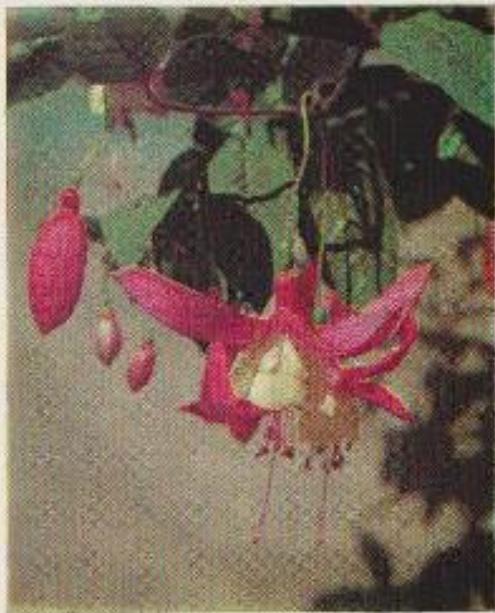

MIDGE. A little gem, stem and small broad recurved sepals are flushed pink outer side, deeper pink underside. Corolla fully double, a lovely shade of clear silver blue. Plant is self-branching with small dark green foliage. In two years has only grown a foot high. Introduced by Muriel Waltz, for Mr. J. W. Farrington, of Alameda.

NOBILITY. (Martin). Corolla, very light blue to orchid pink. Sepals, dark red. D.

NIAGARA. (Schnabel-Paskesen). Double corolla is rose veined on a clear white base. Sepals thick and granular white, with very pale pink edges, flushed pale green.

NIGHTINGALE. (Waltz). A large, frilly double natural trailer, our first of the tri-coloured varieties. The short tube and sepals are white, flushed pink; centre of corolla a deep purple. As flower matures, centre of corolla turns a bright magenta with outer petals of pink and white and coral tones.

PINK CLOUD. (Waltz). Long wide upturned pink sepals curl slightly at tips; buds are long and pointed. The corolla has four overlapping petals of clear pink, flaring at maturity. S.

RED RIBBONS

PINK FLAMINGO. (Castro).

Corolla, very long, pale pink to dark pink, veining from base. Sepals, dark pink, that curl into various shapes, giving an effect of flamingos. S.D.

PREMIERE. (Castro). Corolla violet, with red marbling. Sepals, carmine. D.

PELORIA. (Martin). Upright, double. Corolla, large star shaped, purple in centre and red petals on outer side. Sepals, large, dark red.

PINK FAVOURITE. (Tiret).

This is strictly a pot or border plant. The large, deep pink flowers are as big as "Angela Leslie," but are a shade lighter in colour. Mr. Tiret has grown this plant in his yard for the last three years, and even though the plant is only 15in. high, every year it is loaded with flowers.

ANGELS FLIGHT

PINWHEEL. (Waltz). Flower resembles a pinwheel in form. Pink sepals. Corolla, a lovely shade of violet has folded petals which open wide in centre. D.

PINK DELIGHT. (Waltz). Sport of the beautiful fuchsia Guenivere. Tube and long frosty gracefully curved sepals are white, flushed palest pink. Corolla has overlapping petals of clear pink with lavender undertones, fading a deeper shade as flower matures. S.

B. **QUEEN OF HEARTS.** (Kenneff). Corolla, the four centre petals of violet-purple are surrounded by many petaloids of a lighter carmine pink. Sepals, carmine. D.

RED BUTTONS. (Hedges). Single orange red corolla and outspread long-pointed orange-red sepals.

RED RIBBONS. (Martin). Trailer, with double stark white corolla and extra reddish red sepals that curl up to form a bow. Sepals form the main blossom effect. S.

B. **RAMBLING ROSE.** (Tiret). Corolla and sepals are soft rose. An exceptionally heavy bloomer in a colour not previously found in trailing fuchsias. D.

B. **RUFFLES.** (Erickson). Distinctly ruffled, double and spreading corolla deep violet, small outer petals marbled pink with noticeably long stamens. Short, waxy tube with broad upturned sepals, deep pink, tipped green.

SLEIGH BELLS. (Waltz). All white, beautiful single flower. Has long, thin, pointed upturned sepals tipped green, and a slim white tube. The single corolla forms itself into a perfect bell. Ideal espaliered, can also be grown as a bush. This is undoubtedly the single white we have been waiting for over here.

'S WONDERFUL. (Castro). Upright or semi-trailer, double. Corolla, medium double, inner petals pale lavender; outer petals orchid pink. Sepals, pink, very colourful.

SUNDOWN. (Castro). Corolla, large dark lavender with dark pink streaks emerging out of the base of the sepals, running into the petals. Sepals, red. D.

SONATA. (Tiret). Large, double, clear white corolla, with pink sepals. Upright grower. This fills the need for a large, sturdy pink and white than can "take it."

SNOWBALL. Large white double. Corolla, creamy white and very double. Tiny flush of pink at base if in sun. Sepals, long and reflexed. Vigorous grower, but needs moist conditions in warmish shade, with good drainage. A gorgeous flower.

STRAWBERRY SUNDAE. (Kenneff). Extremely double, bright strawberry pink corolla. Sepals, waxy ivory, white tipped with green. Foliage is small, compact medium green leaves.

STARLITE. (Waltz). A large, double semi trailer or upright. Tube and broad pointed sepals are a new smoky rose shade. Corolla, a deeper shade of lilac rose opens into a square shaped flower, with a star-like centre.

TEMPTATION. Upright, single flower with lilac to rose coloured bell-shaped corolla, with coral sepals turning back against the stem.

- TOPAZ.** (Kennett). Corolla, violet-purple centre petals, with topaz marbling, medium size. Outer petals coral and topaz marbling, with violet. Sepals, light coral. D.
- B. **TAFFY.** (Martin). Corolla, several shades of pink. Sepals, long pink. Very colourful and different. S.
- THE FRANCISCAN.** (Schnabel-Paskesen). Pink, medium-sized flaring flowers having a rich, flowing quality. A fully double corolla, faintly rose veined, set off by broad granular sepals, perfectly matching the bright pink corolla.
- TUTTI-FRUITTL** (Schnabel-Paskesen). Magenta rose. Reflexed pale pink granular sepals. The four centre petals are well defined while the many auxiliary petals are etched and marbled with rose pink. D.
- B. **TIFFANY.** (Reedstrom). Large double, pure white corolla with upturned sepals, palest pink. Upper side of sepals white.
- B. **TEXAS LONGHORN (Fuchsia-La).** Tube and long outspreading sepals are bright red, the single to semi-double corolla clear white.
- WARPAINT.** (Kennett). Corolla, dianthus purple with coral-pink marbling, fading to reddish-purple. Sepals, white. D.
- B. **WAIKIKI.** (Tiret). Trailer, with large double red corolla and recurving sepals of white, flushed pale pink. A beautiful trailer for every collection.
- WHIRLAWAY.** (Waltz). A large, semi-double natural trailer. Has short, greenish tube and the extra long sepals are white, tipped green, with splashes of pink at base of bud. The buds carried on extra long stems open soft milky white and sepals flare out in novel fashion, then curl up and under. Corolla develops a delicate blush pink tint as flower matures. Branches are long and willowy with medium size foliage. By pinching back well you can have a show basket as flowers bloom along the stem as well as the tips. This is one that everybody will buy. Probably the heaviest booked fuchsia in our show groups this year.
- YUM YUM.** (Erickson). Rose pink with orchid undertone. Sepals, light pink, tube and outside of sepals flushed green. D.

NEW INTRODUCTION

HIGHLAND BEAUTY. Sepals dawn pink, overlaid neon rose, apices green, slightly recurved. Corolla double amethyst violet, tinged pink flush when young; fuchsia purple when older. Winner of 2nd prize for new seedling, British Fuchsia Societies Show, 1960. We have pleasure in introducing this on behalf of Mr. W. D. Clark, the well-known exhibitor and grower, of Camberley, Surrey.

Plants only 5/-

OUR OWN NEW INTRODUCTIONS, 1962

PLANTS ONLY EX. 2½in. POTS—5/- EACH

LONELY BALLERINA. Sepals dark carmine. Corolla fully double, flushed and veined carmine.

	PAINTERQUE	FORGOTTEN DREAMS. Large reflexing sepals of a coral shade with deeper markings. Corolla, double dusky purple. Unusual colour combination. Shown at Southport this year for the first time and was very well received.

GOLDEN DAWN

TERMS OF BUSINESS

All plants sent out by us are of first class quality, grown on our own nurseries; we never buy in for re-sale. Everything is guaranteed true to name.

Rooted cuttings are sent by parcel post and we guarantee safe delivery and complete satisfaction on delivery. Plants are sent by passenger train at owners' risk rates unless we are instructed to the contrary. Every care is taken by us in packing, but we accept no responsibility for loss or damage by British Railways. Any complaint must be made on receipt of plants.

Where cash does not accompany the order a pro-forma invoice will be sent as soon as plants are ready for despatch.

It is not often that we have to substitute but at times a run on a particular variety occurs or it starts badly. The only reason we substitute is to avoid holding up your order. Where possible please state an alternative variety and if you are going to make standards specify unstopped plants. Where substitutes are not acceptable please state so.

If the customer wishes to take our selection at the lower price, we are always happy to co-operate by not duplicating any he already has in his collection.

PACKING AND CARRIAGE CHARGES

Rooted Cuttings, 2/3 on any quantity.

Plants ex. 2½in. pots:—

Plants under 10/-, add 2/3.

Plants over 10/-, add 3/-.

CULTURAL INSTRUCTIONS

ROOTED CUTTINGS.

These should be potted into 2½-inch pots using John Innes No. 2 compost, or alternatively a mixture of the following:—3 Stacked Loam, 2 Granulated Peat, 1 Sharp Grit Sand. To every wheelbarrow full of this mixture add a five-inch potful of good general fertilizer. Special care should be given to watering until plant's commence growth. If sun is strong, shade plants with tissue paper. In order to keep plant bushy, pinch out the growing tip, and also resulting four side-shoots at the second leaf. Further pinching out of shoots may be done and to time flowering allow eight weeks from last stopping. Keep plants moving by gradually potting on into a size larger pot. It is not usual to exceed a five or six inch pot the first year.

PLANTS EX. 2½-inch POTS

These should be given exactly the same treatment as for rooted cuttings, potting firstly into a 3½-inch pot.

WHERE NO GREENHOUSE IS AVAILABLE.

Use a well lighted window and give exactly the same treatment as in a greenhouse. Early June the plants may be stood out of doors or plunged in beds, but first of all stand for a few days in a shady spot to harden off.

BASKETS.

It is usual to use three plants for an average size basket. Grow plants in pots, pinching back to make them nice and bushy. Where baskets are required for outside, make up the basket a few weeks beforehand and leave hanging in the greenhouse to become well established. Varieties suitable for baskets are marked in the catalogue with a "B." We would also like to point out that varieties described as basket varieties can often be trained up a centre stake and the side shoots pinched back to a second leaf, making excellent pyramids.

STANDARDS.

These are made by growing your plant on a single stem, removing all side shoots until the desired height is reached. The tip is then pinched out and the resulting four side shoots pinched at the second leaf in order to form a head. We grow a large number of standards every year and these are available in different varieties and prices ranging from 7/6d. to 35/- By far the best method is to have whips; these are straight stems of about 3ft. ready to form a head, and travel far better by rail. Full list of varieties and prices will be available in February for which please enclose a stamped addressed envelope.

FEEDING.

This should be done only when the pot is full of roots. Any good make of liquid feed is suitable, but we recommend John Innes Liquid Feed in crystal form. This can be supplied by us in 5/- packets, post paid.

PESTS.

Greenfly. This is easily controlled by fumigating the greenhouse every few weeks with nicotine shreds.

White Fly. Fumigate with DDT/BHC/Lindane.

Red Spider Mite. The finest deterrent is clear water forcibly sprayed on the underside of the leaves.

WINTER TREATMENT.

In late Autumn when flowering finishes, encourage your plants to rest by gradually withholding water, but on no account allow them to dry out. Keep as cool as possible, but clear of frost. Plants may be started into growth early February by giving more warmth and water. Remove carefully most of the old soil from the roots and re-pot into a smaller pot and prune to shape. Procedure is then as for a young plant.

HARDINESS.

We are being continually asked if it is possible to winter out of doors the large flowered, so-called half-hardy varieties. We have numerous customers who tell us they are quite successful in doing so, and in districts where we would have thought it impossible. Our reply therefore is that it is worth trying, particularly where the site is sheltered and well drained. Endeavour to plant a good sized specimen so that a firm roothold is made before winter. A covering of peat or straw around the base gives protection during winter.

We are pleased to help with any of your queries regarding Fuchsias, but a stamped addressed envelope must be enclosed.

Customers will note that Plants are priced first and Rooted Cuttings second.
